

# REACH Lebanon Multisector Needs Assessment (MSNA) 2021

January 2022

1. Methodology
2. Sectoral key results

# 1. Methodology

# Methodology

- Data collected from 19th October until 4th December
- Households (HHs) level surveys
- Some specific indicators at individual level, based on HHs composition

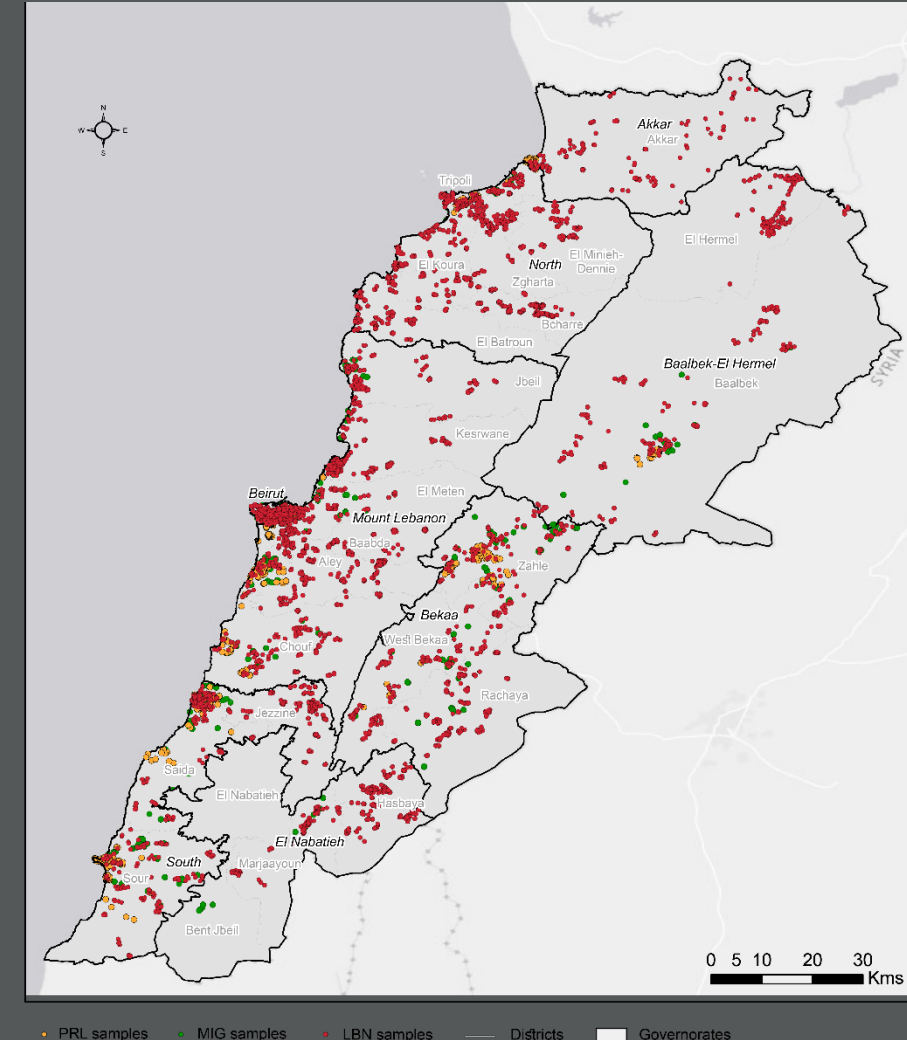

Population group	Targeted number of surveys	Total number of surveys	Sampling strategy	Generalizability of data
Lebanese	3,918	4,232	2-stage stratified clustered sampling	Level of confidence : 95% Margin of error : 10% District level
Migrants	586	712	Snowball sampling	Indicative
PRL	565	668	Random sampling and snowball sampling	Indicative

The targets and total number of surveys include a 10% buffer.

Access restrictions:

- Districts of El Nabatieh and Bent Jbeil
- Dahiyeh area

## Geographic coverage

## 2. MSNA results

## MSNA results

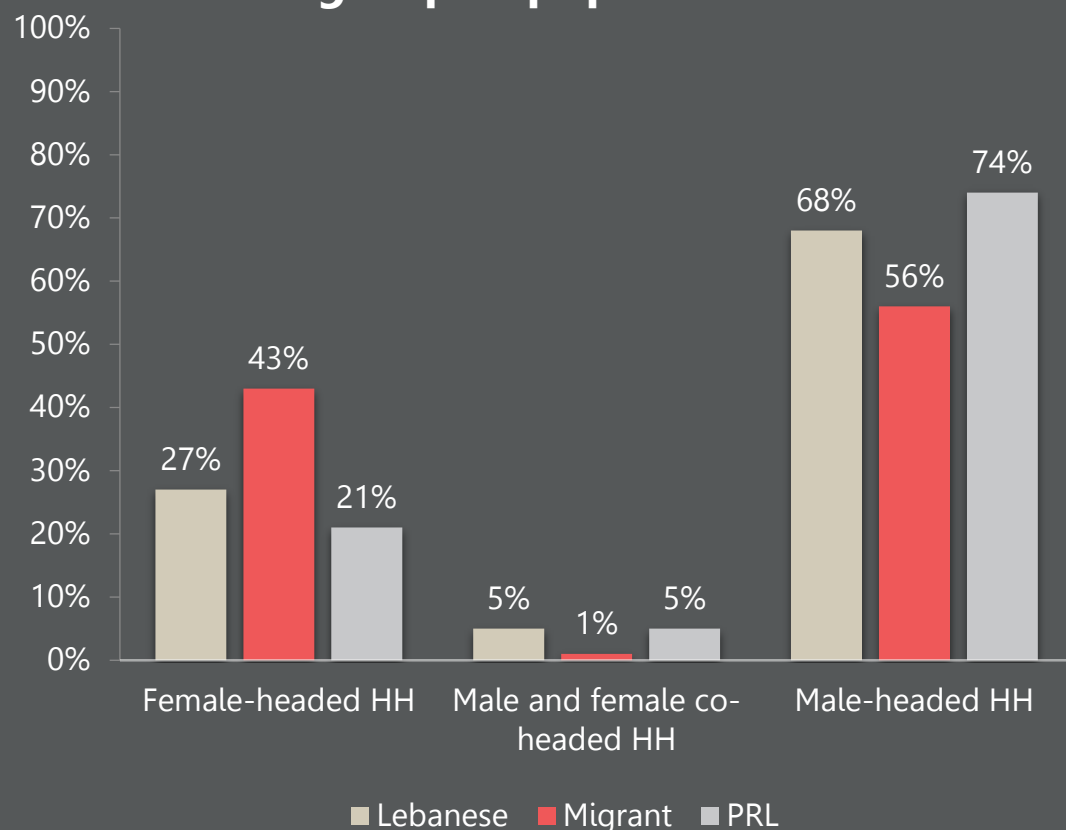

# Remarks and limitations

1. The following results concern Lebanese, migrant and PRL HHs in covered areas only.
2. PRL and migrants' results should be considered as indicative. Findings concerning only a **subgroup** (i.e. children with disabilities, results disaggregated by gender or age, etc.) should also be considered as **indicative**, for the three assessed population groups.
3. During data collection, we received a disproportional amount of surveys refusal in high-income areas. **This might have an impact on the MSNA results**, through a potential over-representation of low and medium-income HHs in certain areas.

# MSNA results

## Demography

% of assessed HHs by gender of head of HH, per group of population

Average age of respondents:

Lebanese: **54 years old**

Migrant: **32 years old**

PRL: **50 years old**

Average number of members in the HH:

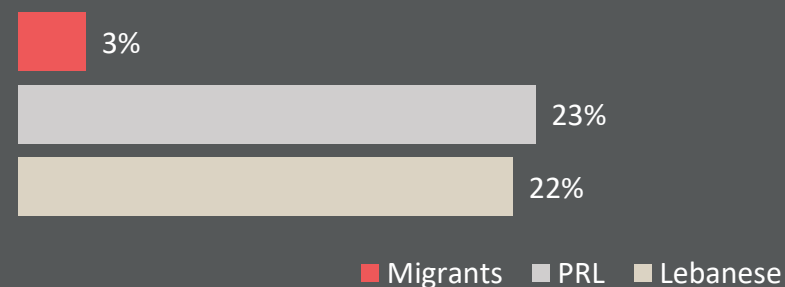

Lebanese: **3.86**

Migrant: **1.75**

PRL: **4.18**

## Washington group

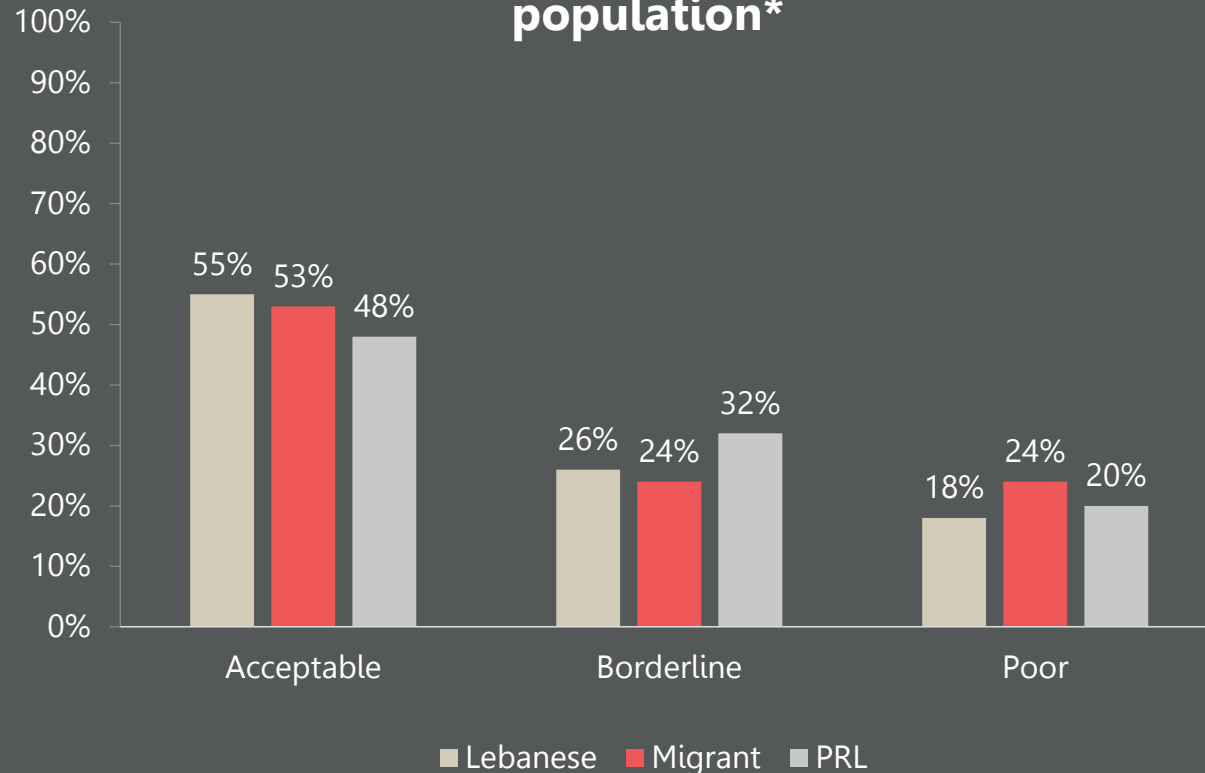

% of HHs reporting at least one member with disabilities, per population group

# MSNA results

## Food security and nutrition

% of assessed HHs per food consumption score, per group of population\*

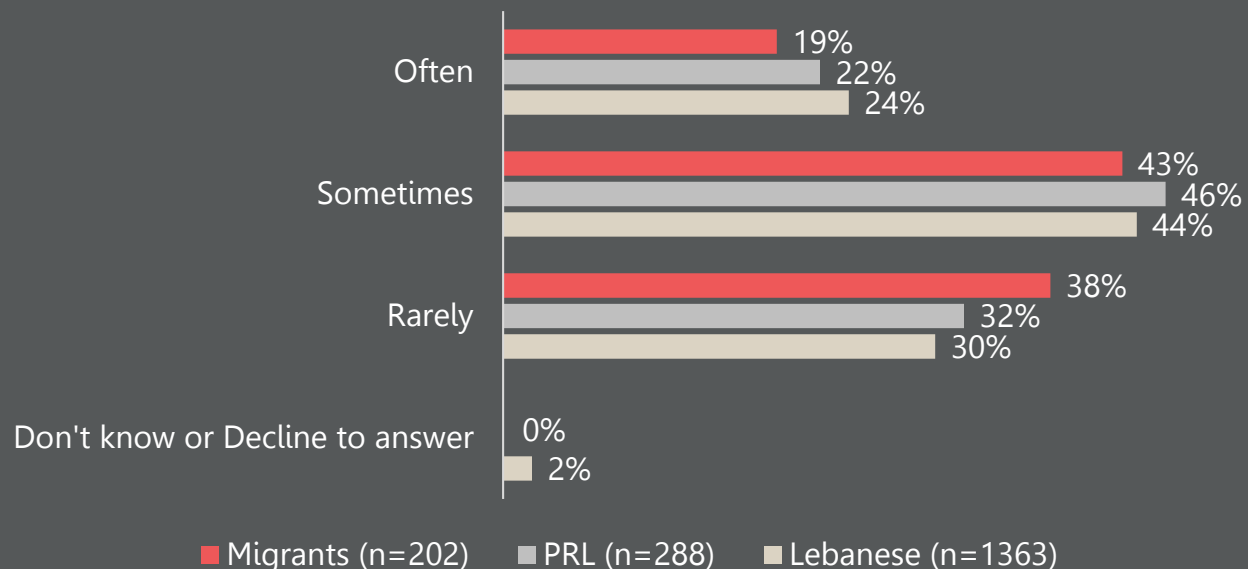

- **43%** of PRL, **34%** of Lebanese and **25%** of migrant assessed HHs reported at least one member **bought food on credit or borrowed money to buy food** in the 30 days prior to data collection.
- **23%** of Lebanese, **22%** of PRL and **8%** of migrant assessed HHs reported at least one member **sold productive assets and/ or means of transportation to buy food** in the 30 days prior to data collection.

# MSNA results

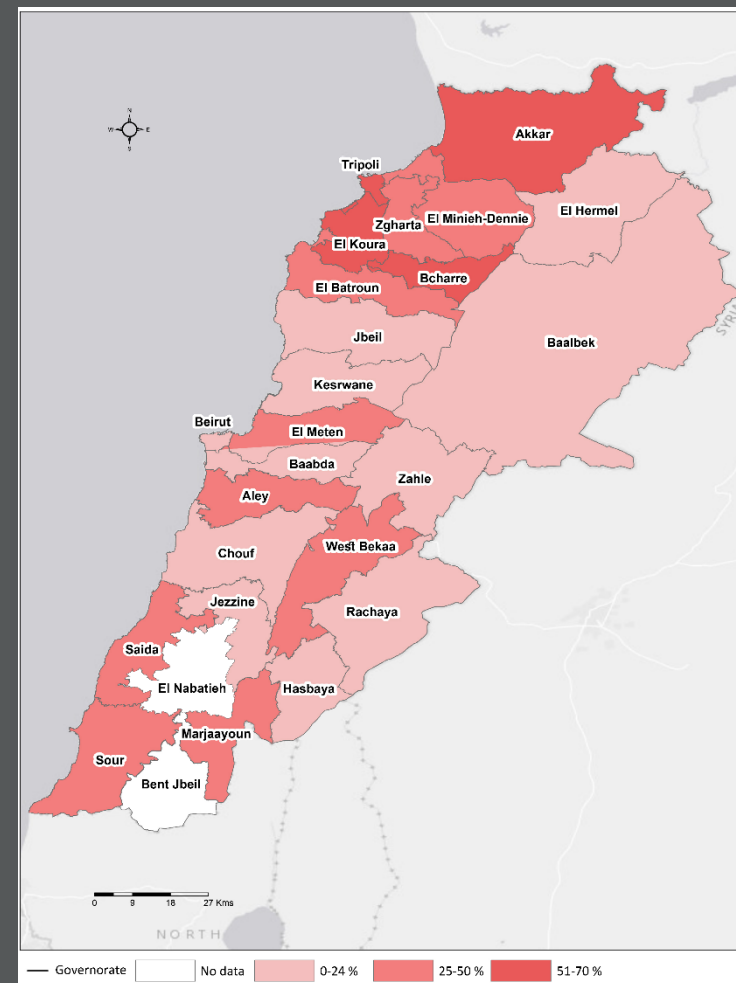

## Food security and nutrition

**32%** of Lebanese, **22%** of migrant and **46%** of PRL assessed HHs reported cases when there was **no food to eat of any kind** in their house because of **lack of resources** to get food in the 30 days prior to data collection.

**% of assessed HHs reporting no food of any kind to eat by recurrence of the event in the 30 days prior to data collection, by group of population\***

**% of Lebanese HHs reporting no food to eat of any kind in the 30 days prior to data collection, by district**

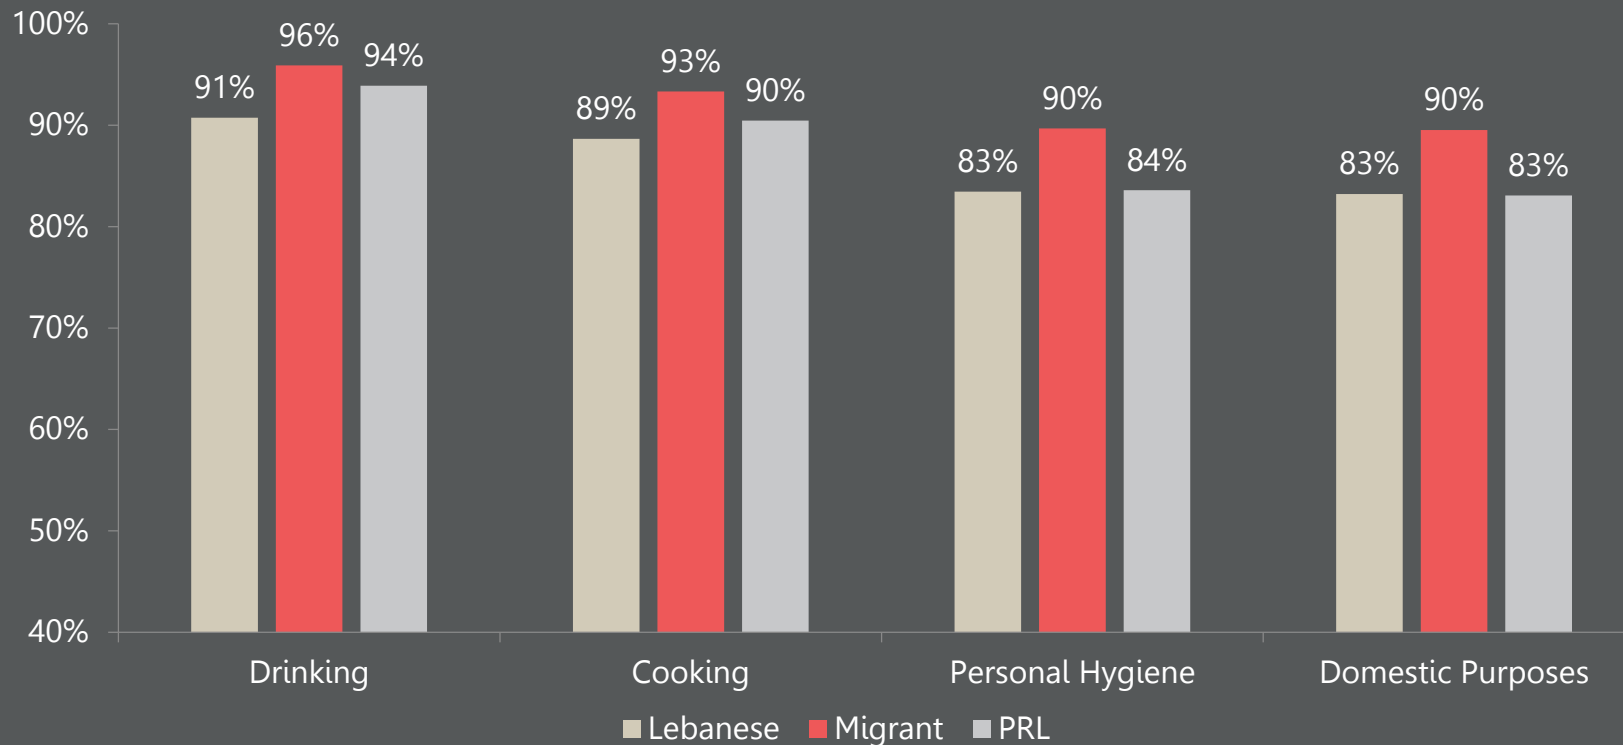

\* Subgroup : Among HHs reporting no food to eat of any kind in their house because of a lack of resources; results should be considered as indicative.

# MSNA results

## WASH

% of assessed HH reporting having access to sufficient water to cover basic needs, per type of water basic needs and population groups

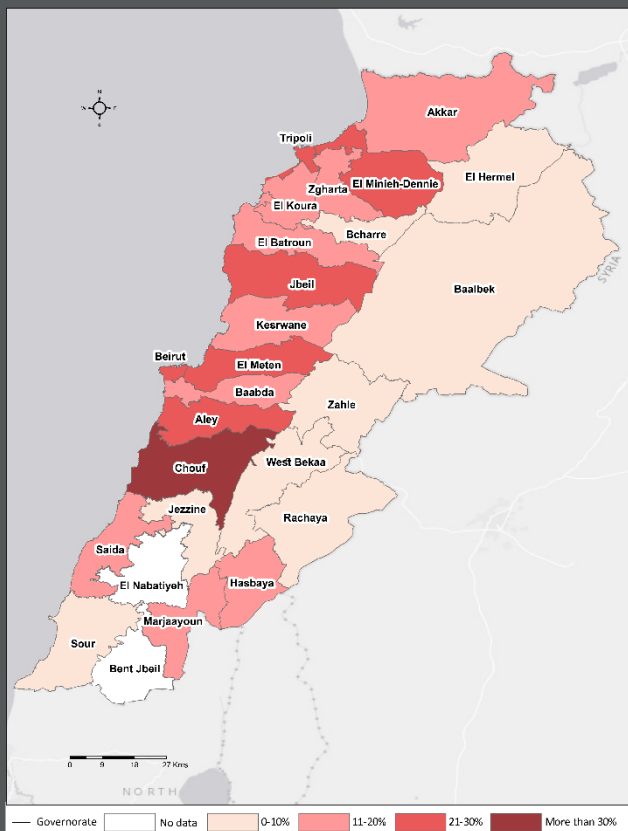

- The highest WASH vulnerabilities have been found for male and female co-headed households, with respectively 16%, 21%, 25% and 25% of assessed HHs reporting not enough water to drink, cook, and for personal hygiene and domestic purposes.
- In the 6 months prior to data collection, **36%** of migrant, **35%** of Lebanese and **20%** of PRL assessed HHs have spent money usually spent on other things to buy **water to cope with lack of water\***.

# MSNA results

## Hygiene

% of **Lebanese** HHs reporting not enough water to cover personal hygiene needs in the 30 days prior to data collection, by district

- 16% of migrant, 11% of Lebanese and 9% of PRL assessed HHs reported the **reduction of NFI consumption for personal hygiene** as their main coping strategy to issues related to hygiene items in the 30 days prior to data collection.
- 53% of PRL, 44% of Lebanese and 20% of migrants assessed HHs reported relying on **less preferred types of menstrual items** as their main coping strategies to issues related to menstrual items, in the 30 days prior to data collection.

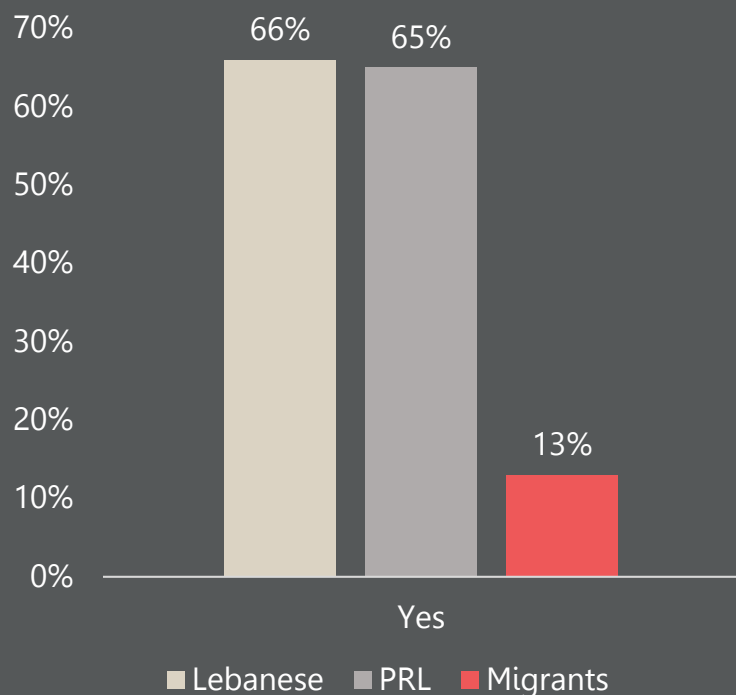

## Sanitation

- 14% of Lebanese HHs reported a **hand-dug hole in the ground** as their main draining system for toilet/latrine wastewater.

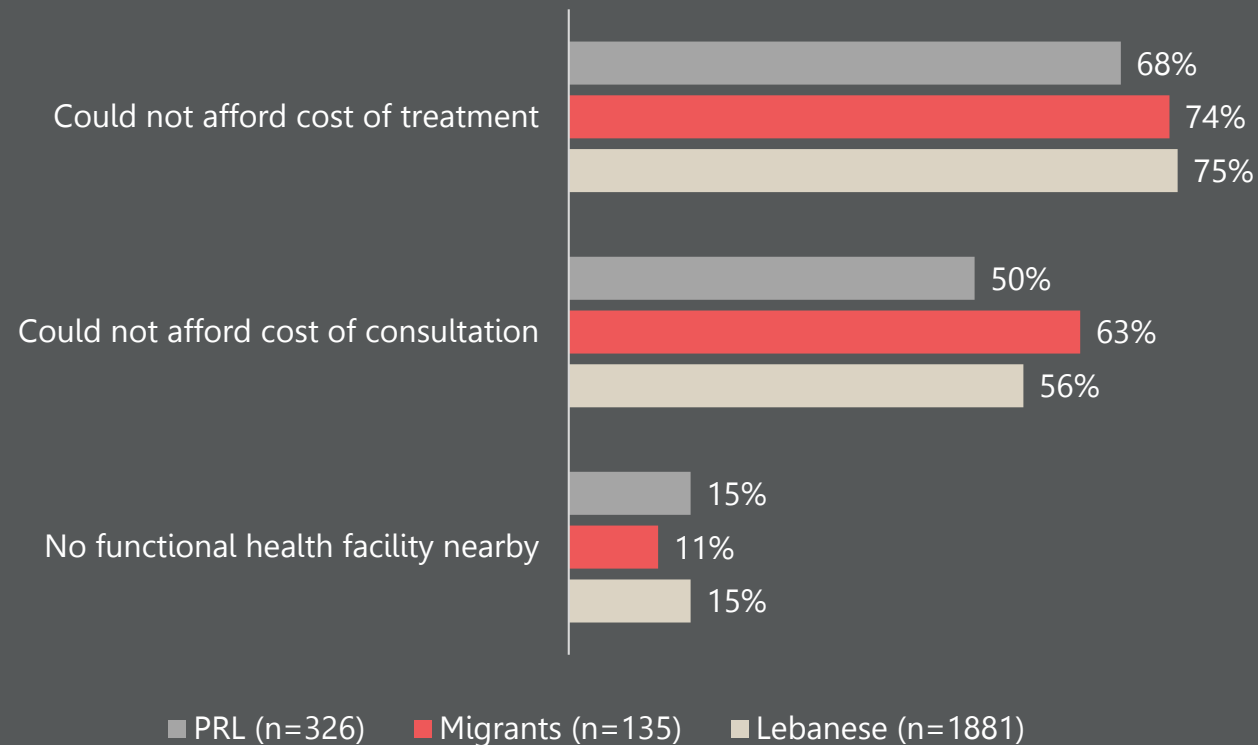

# MSNA results

## Health

% of assessed HHs reporting at least one member with a chronic illness

Main barriers reported by assessed HHs that prevented them from accessing health care in the 3 months prior to data collection\*;\*\*

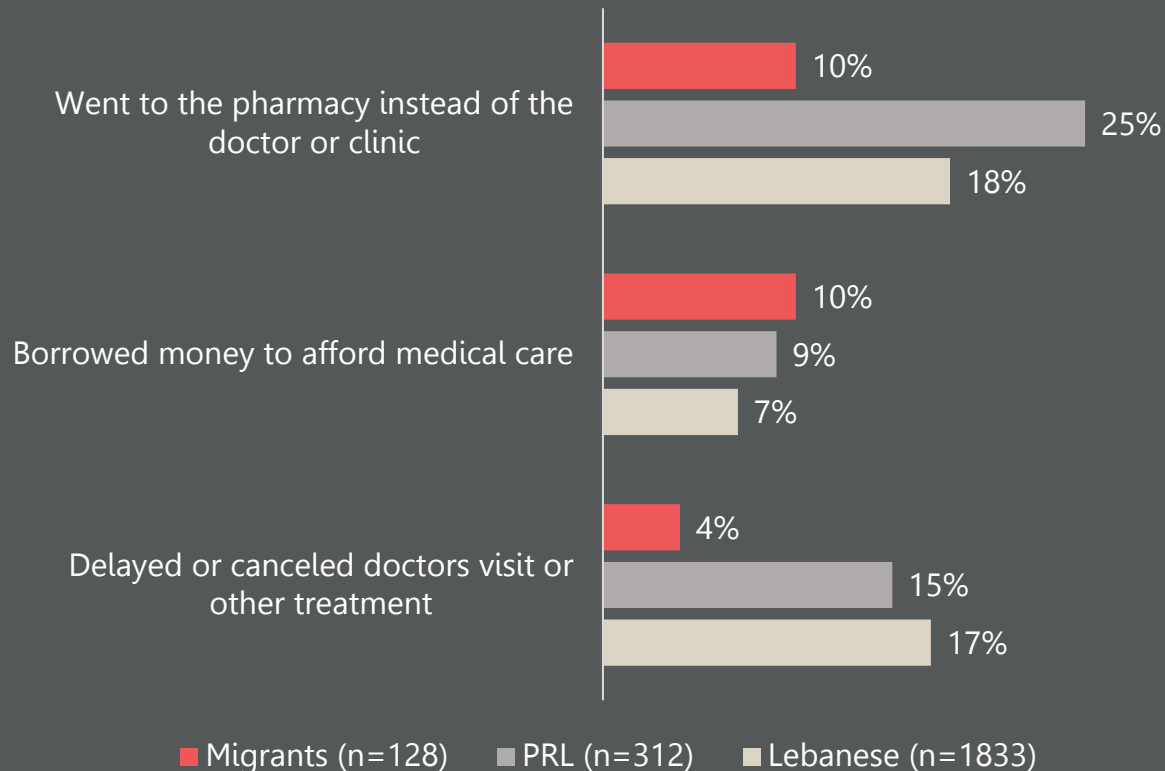

\*Multiple choices; the total of percentages can exceed 100%

\*\*Subgroup: HHs reporting at least one member needed to access health care in the 3 months prior to data collection; results should be considered as indicative.

# MSNA results

## Health

Main coping mechanisms reported by HHs who encountered barriers to access health care in the 3 months prior to data collection\*;\*\*

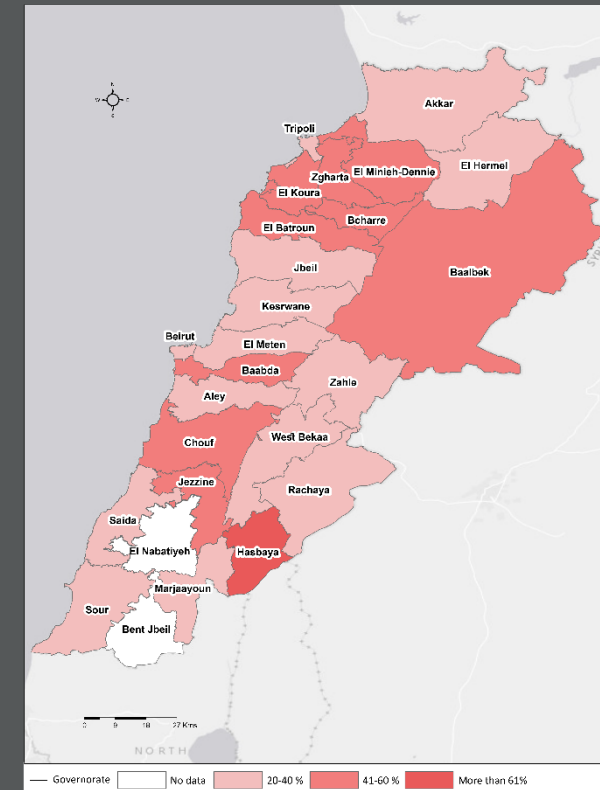

\*Multiple choices; the total of percentages can exceed 100%

\*\*Subgroup: HHs reporting at least one member needed to access health care in the 3 months prior to data collection; results should be considered as indicative.

- 87% of Lebanese, 86% of PRL and 50% of migrant HHs reported having experienced **barriers that prevented them from accessing medication** when needed during the 3 months prior to data collection.

% of **Lebanese** HHs reporting the inaccessibility of medication in health facility as main barrier to access medication, per district

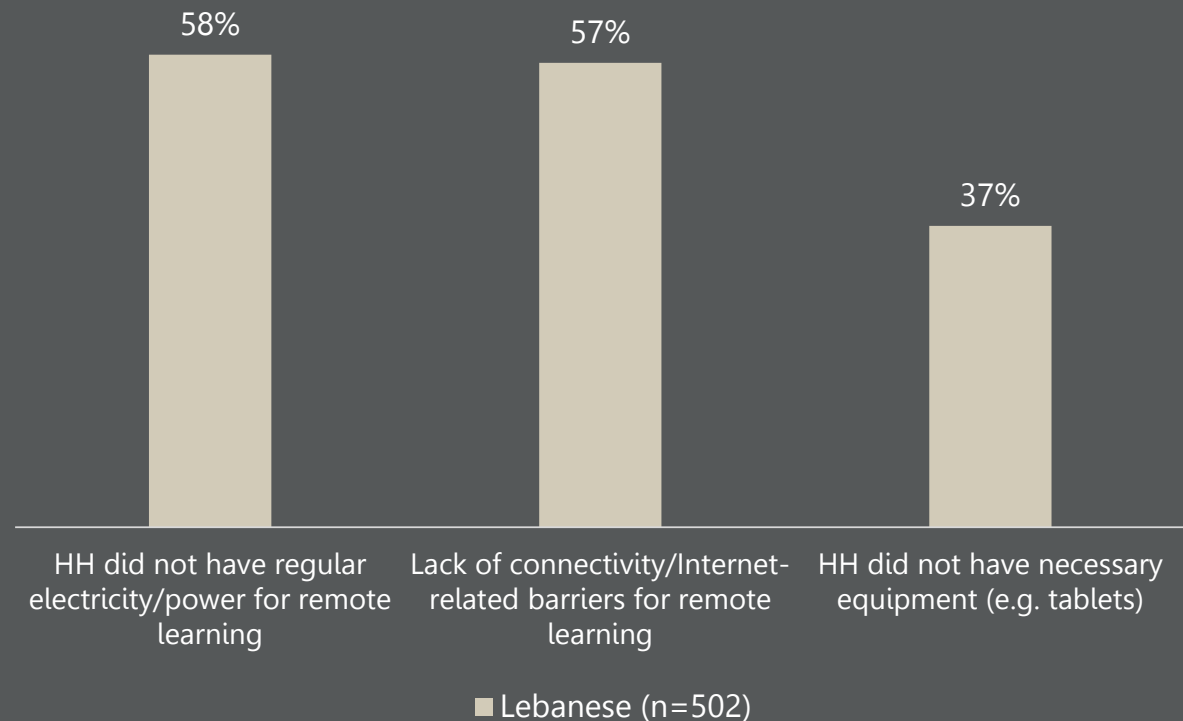

# MSNA results

## Education\*

This section contains findings on 3 555 Lebanese, 774 PRL, and 185 migrant children in the assessed HHs.

- 88% of Lebanese, 81% of PRL, and 57% of migrant school-aged children **were reportedly enrolled** during the 2020-2021 school year.
- Among the enrolled children, 90% of Lebanese, 91% of PRL, and 85% of migrant children **reportedly had access to distance learning** when schools had been closed during the 2020-2021 school year\*\*.
- Among the children reported as not regularly attending school in presence or at distance, 14% of Lebanese, 4% of PRL, and 1% of migrant children **had reportedly dropped out of school** during the 2020-2021 school year\*\*\*.

### Among children reported as dropping out of school, main to explain their drop out during the school year 2020-2021\*\*\*;\*\*\*\*

\* Only households with children aged between 4 and 18 years old were asked questions; results should be considered as indicative for this section

\*\* All question related to attendance (psychical or distant) were only asked to respondents who reported children enrolled in formal schools for the school year 2020-2021; the data mentioned is only indicative. Lebanese n= 3147; PRL n= 624; Migrant n= 104.

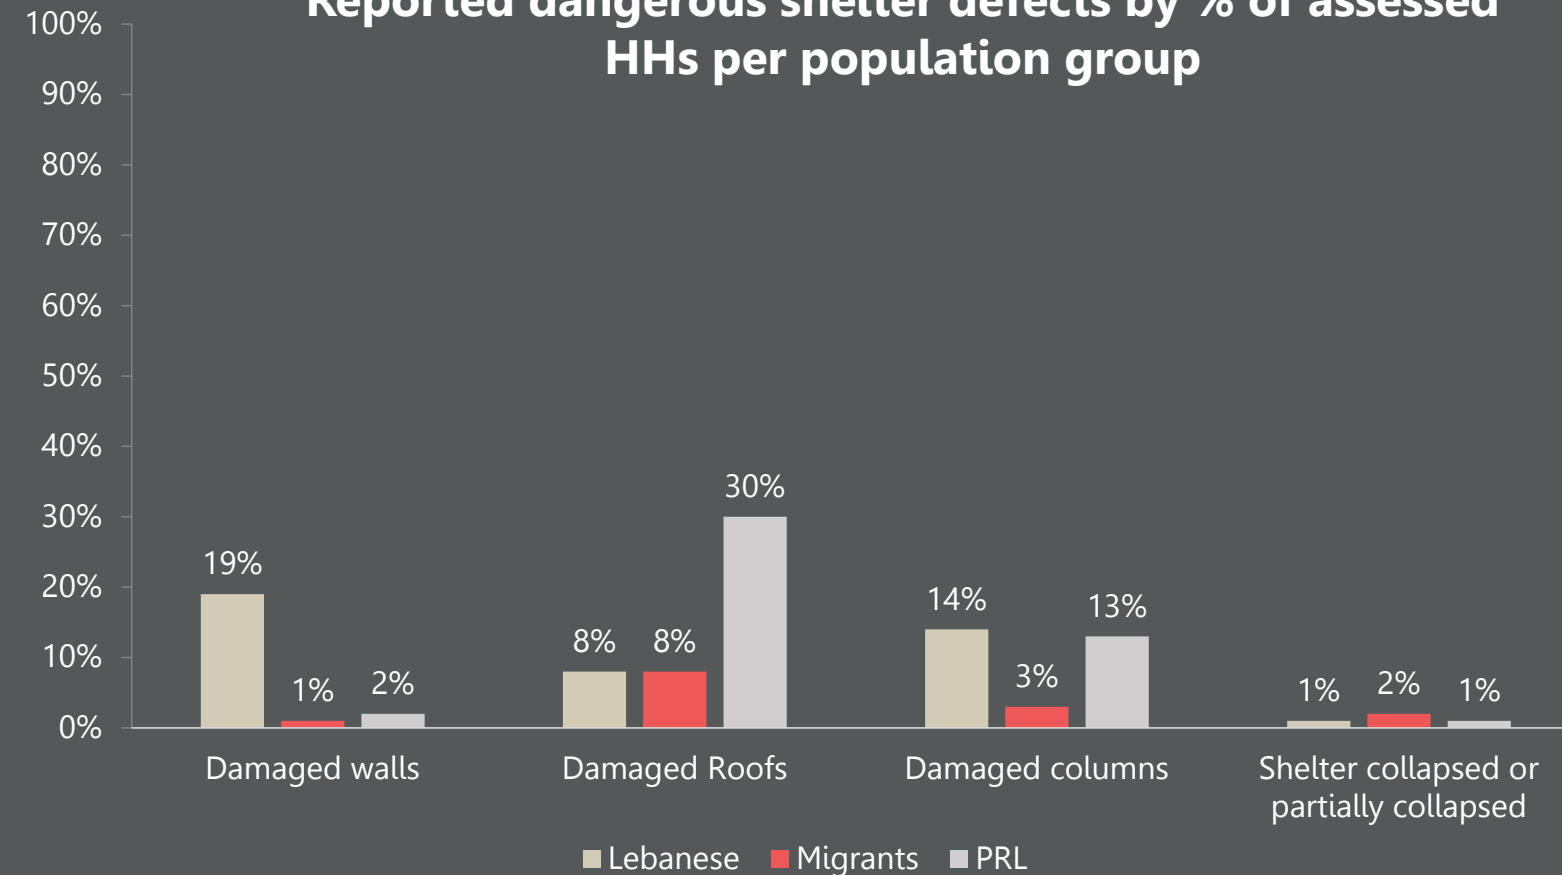

\*\*\* The sample for PRL and migrants was not big enough to obtain reliable data (PRL n=94; Migrants n=94), reason why only Lebanese results are being shared.

\*\*\*\*Multiple choices question, the total of percentages can exceed 100%

# MSNA results

## Shelter

Reported dangerous shelter defects by % of assessed HHs per population group

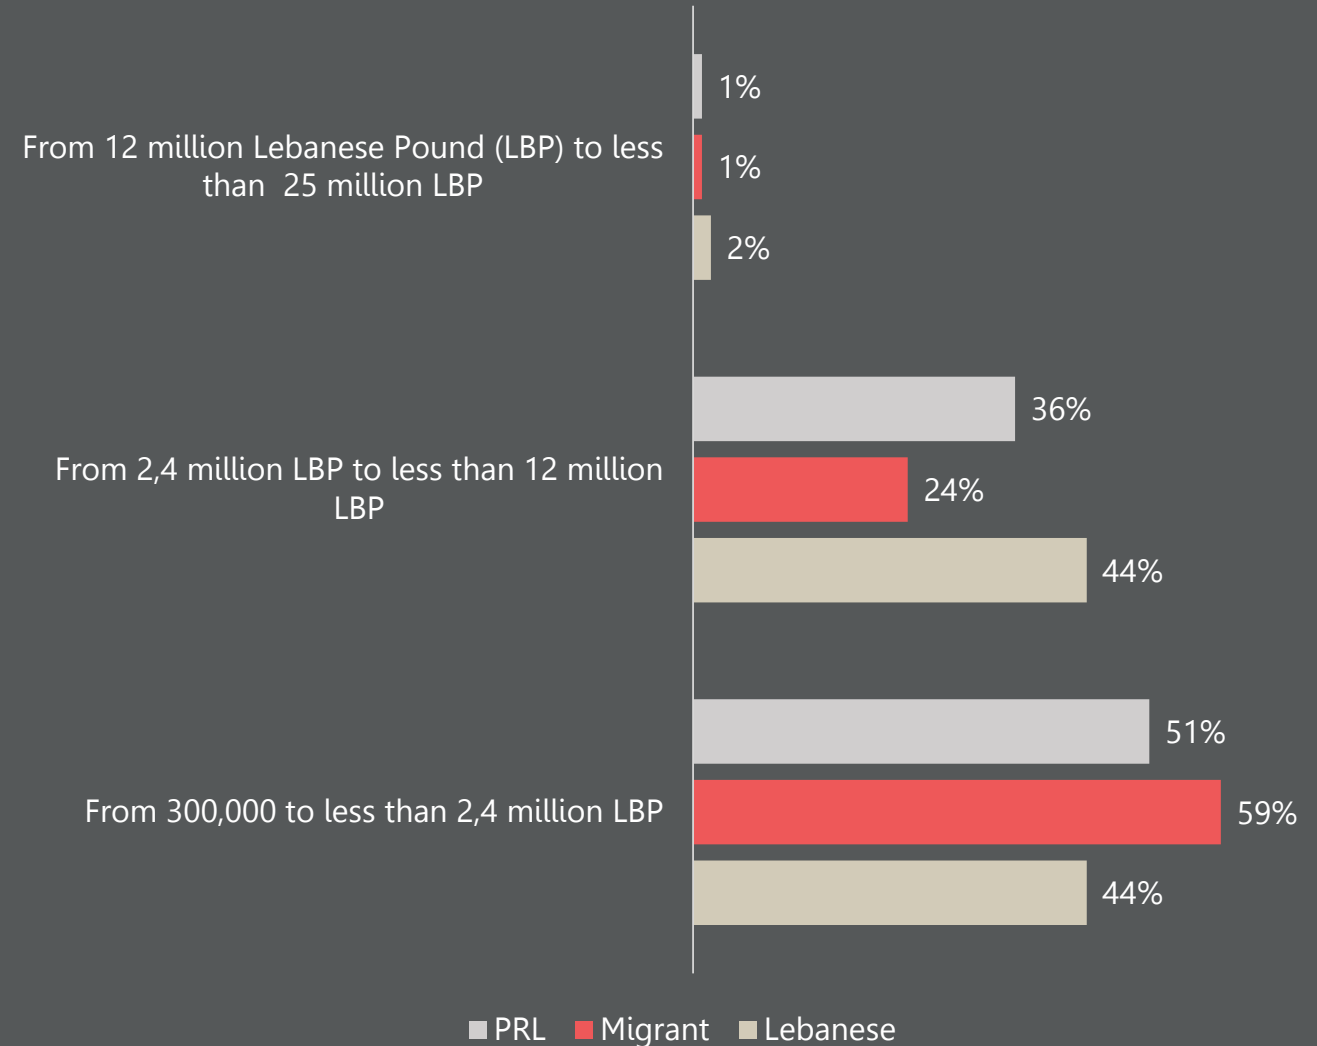

- 98% of Lebanese, 98% of PRL and 89% of migrant assessed HHs reported living in an apartment, house or room, which are considered as **sustainable shelter types**.
- 26% of PRL, 19% of Lebanese and 15% of migrant assessed HHs reporting renting their apartment\* had an **informal verbal lease agreement**. This may include increasing risks of eviction as the country is currently facing an considerable inflation.

# MSNA results

## Livelihoods

- **63%** of PRL, **62%** of Lebanese and **37%** of migrant assessed HHs reported facing **challenges affording basic needs** as a result of lost or reduced employment.
- **23%** of Lebanese, **16%** of PRL, and **6%** of migrant assessed HHs reported **savings as their primary income source** in the 30 days prior data collection to afford basic needs.
- The main reason reported by assessed HHs\* from the three population groups for owing debts was to cover **basic household expenditures** (Lebanese HHs 48%, PRL and migrant HHs 50%).

## Category of income reported by HHs in the 30 days prior to data collection, per population group\*\*

\*Subgroup: HHs reporting owing debts. Lebanese HHs n=1805; PRL HHs n=317; Migrant HHs n=206. Results should be considered as indicative.

\*\*The graph does not include results for "Decline to answer" and "Do not know" options; the total of the percentages can differ from 100%

# MSNA results

## Protection

### Gender-Based Violence (GBV)

More than half of assessed HHs among the three population groups reported no main safety and security concerns for women and girls.

89% of migrant, 87% of Lebanese and 79% of PRL HHs reported no area where women and girls from their community feel unsafe.

- 49% of PRL, 38% of Lebanese and 31% of migrant HHs reporting women feeling unsafe in their community reported that **women feel unsafe in markets\***.

### Child protection

**2%** of Lebanese and 1% of PRL assessed HHs reported school aged children working inside or outside of home, whose **work disrupted their education** for the school year 2020-2021\*\*.

### Information

**4%** of migrant assessed HHs reported information to **assistance to return to their country of origin** as their preferred type of information to be received from humanitarian aid actors.

\*Subgroup: HHs reporting women feeling unsafe. Lebanese HHs n=4088; PRL HHs n=648; Migrant HHs n=423. Results should be considered as indicative

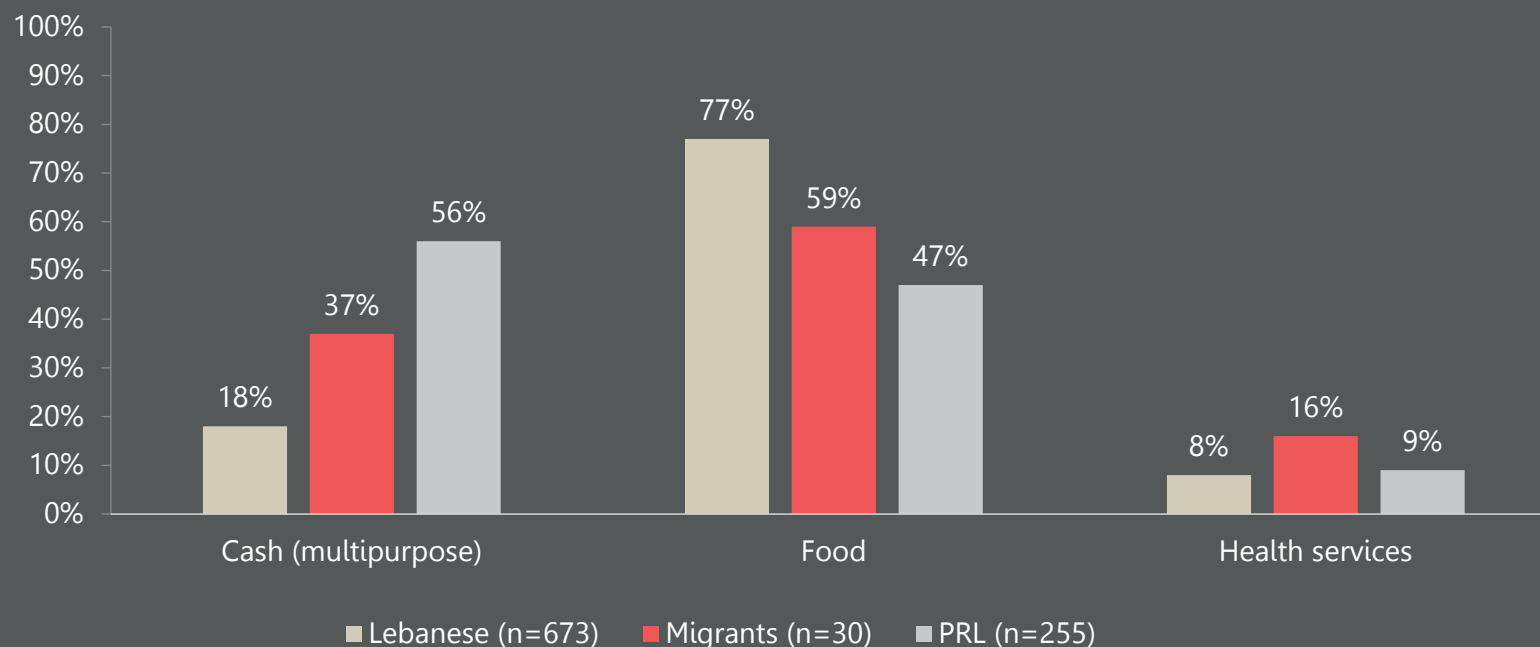

\*\*Subgroup: Asked to respondents who reported children enrolled in formal schools for the school year 2020-2021. Lebanese n=502; PRL n=94; Migrants n=17. Results should be considered as indicative

# MSNA results

## Accountability to Affected Populations (AAP)

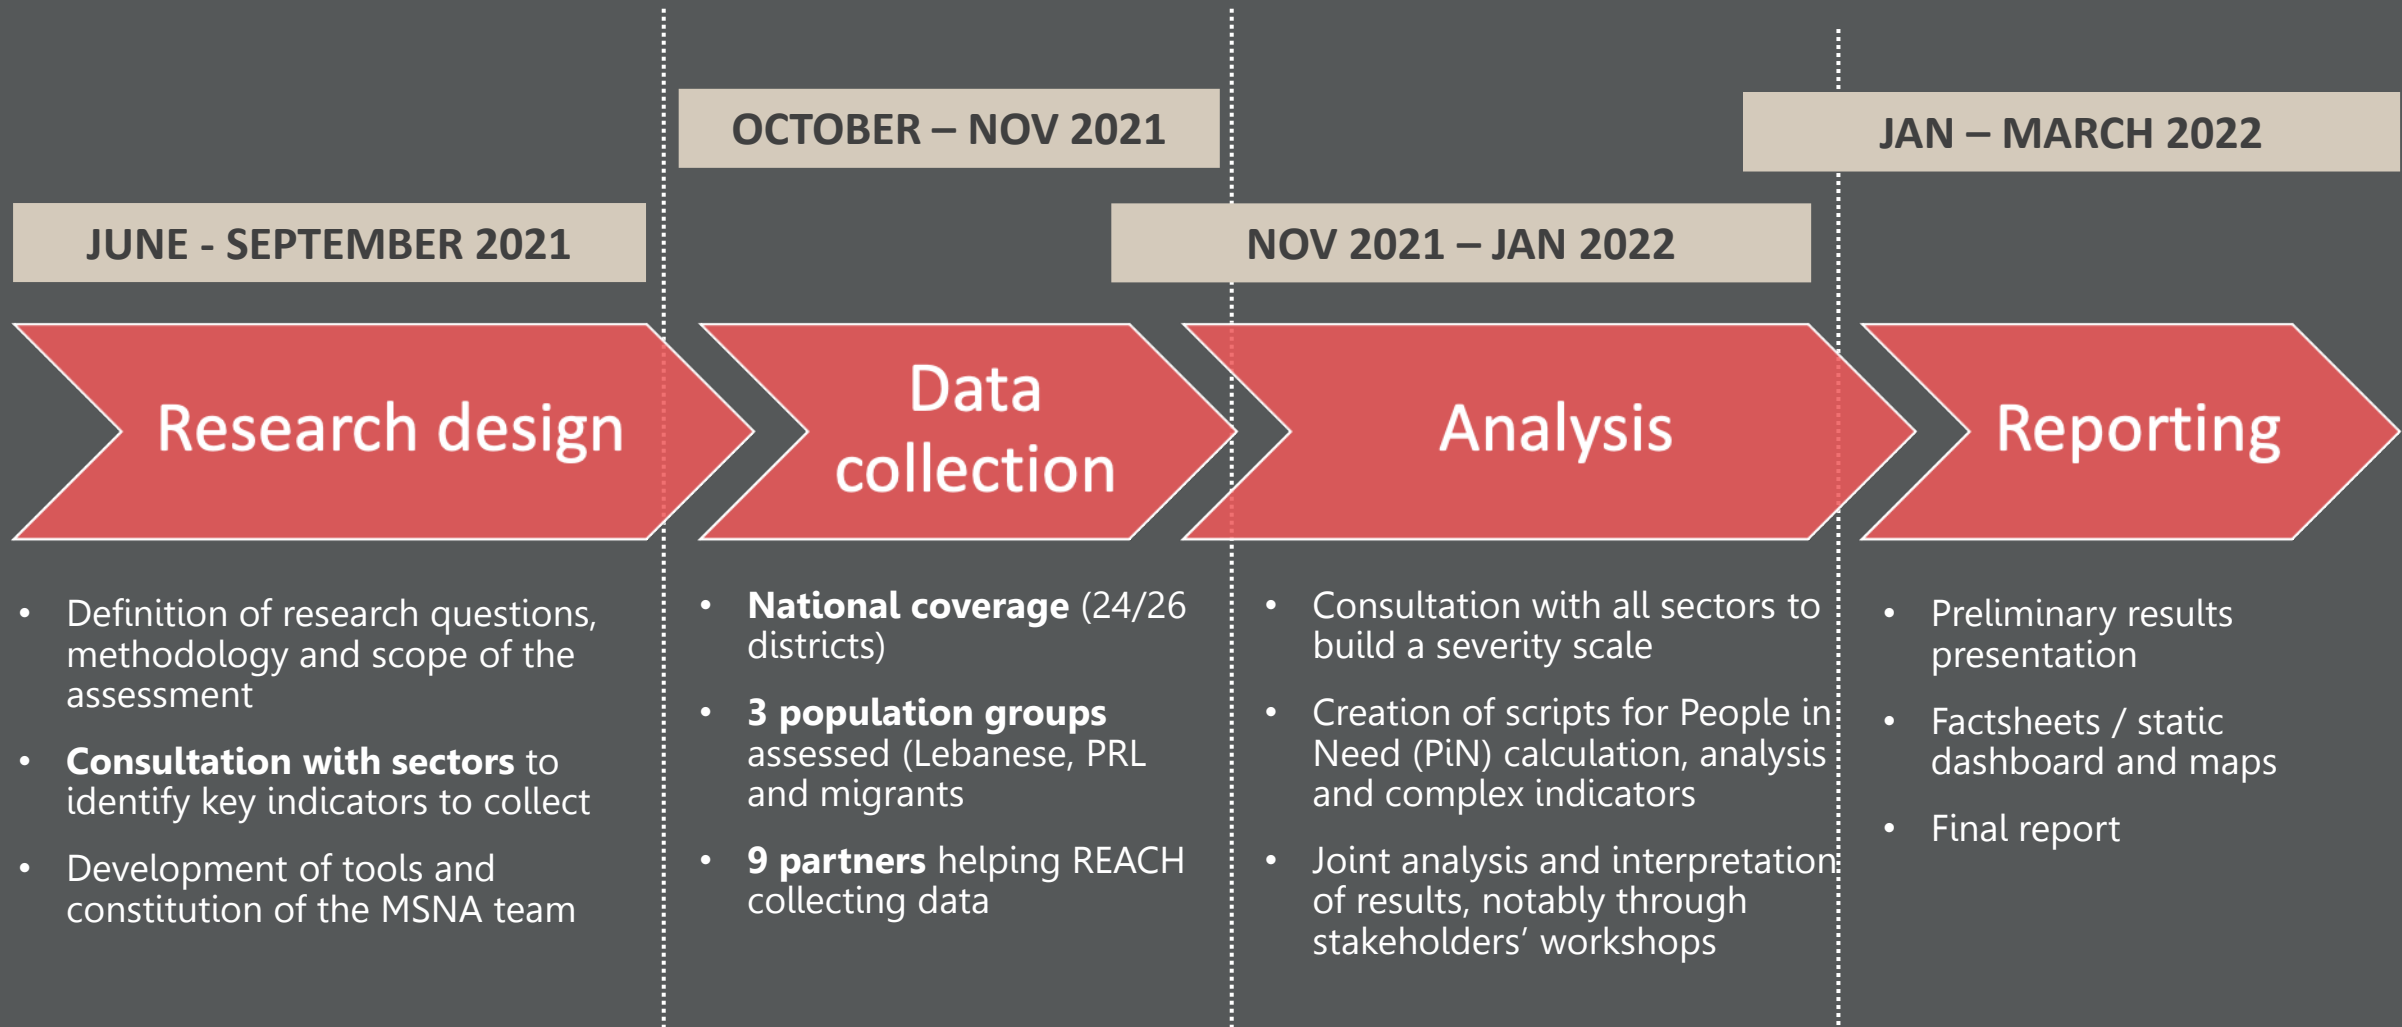

34% of PRL, 14% of Lebanese and 5% of migrant HHs **reported having received some assistance** from a formal governmental or non-governmental actor in the three months prior to data collection

Three main types of assistance received by HHs who reported having received assistance in the 3 months prior to data collection, per population group\*

\* Subgroup: HHs reporting having received assistance in the 3 months prior to data collection; results should be considered as indicative

# THANK YOU FOR YOUR ATTENTION

# Annex: SMART Surveys

# SMART

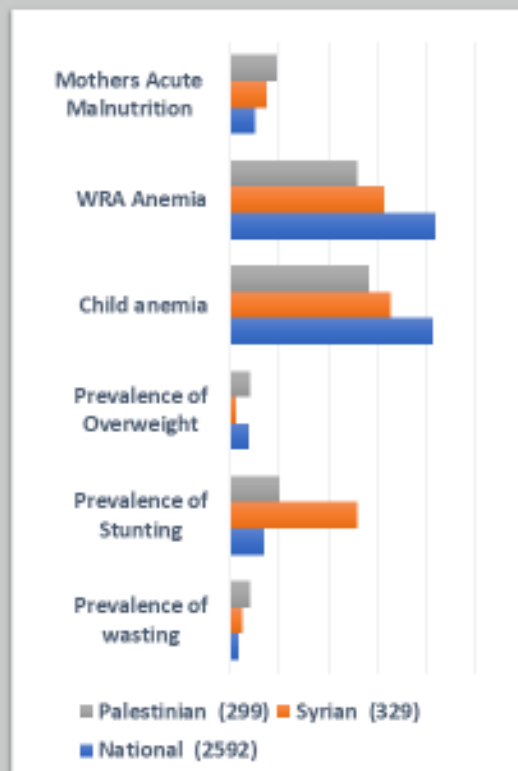

- To estimate the prevalence of all forms of malnutrition and their major drivers among children and women
- 10 partners worked together
- SMART survey in 8 governorates and 2 sub-samples in Palestinian and Syrian Camp and ITS
- 3558 children & 9214 WRA surveyed,
- With extensive QA and plausibility check
- As evidence for policy and programming

# Annex: SMART Surveys

## Malnutrition in children & women in Lebanon, 2021

- 5 % of Mothers had MAM
- 42% of WRA with Anemia
- 1.8% GAM highest in Palestinian (4%)
- Stunting in Syrian (25%) vs 7% national
- 70% of stunted children are Syrian
- 41.3% of children with Anemia

## Diets of young Children

70% missing the Exclusive Breastfeeding

90% deprived of MAD

80% missing MMF, and 70% deprived of MDD

The Vit A and Protein sources are missing the diets of all children
