

Background and Methodology

Since August 2017, an estimated 728,306 Rohingya refugees have arrived in Bangladesh's Cox's Bazar district from Myanmar, bringing the total number of refugees residing in Cox's Bazar, to approximately 906,527. The rapid and massive increase of the refugee population, concentrated in the south of the district in Ukhia and Teknaf, has reportedly had an substantial impact on Bangladeshi host communities' food security, economic vulnerability, market access, labour opportunities and environment.

Based on an identified data gap regarding the needs of the host community population after August 2017, a multi-sector needs assessment (MSNA) was conducted under the coordination of ISCG and facilitated by REACH, in partnership with NPM-ACAPS Analysis Hub, and Translators Without Borders in consultation with Union Nirbahi Officers (UNO). The MSNA targeted the Bangladeshi host community population living in 11 unions across two Upazilas: Ukhia (5 unions) and Teknaf (6 unions). This series of factsheets (14 in total) presents the findings at the Union level (11), the Upazila level (2), and the overall level (1). This factsheet presents the findings for Raja Palong union. A household survey was conducted using a stratified random sample to produce results for Raja Palong where 263 households, that comprised of 1,394 individuals, were surveyed. The results are generalisable to 95% confidence level and 6% margin of error for Raja Palong. Data for this assessment was collected between 11 November - 6 December 2018. The assessment aimed for a 50/50 balance between male and female respondents.

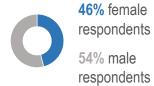

Population³ Households - 10,596 Individuals - 56,895

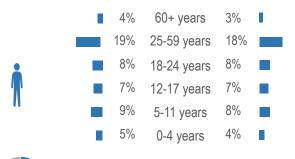

Demographics

36.9 Average age of respondent

Average household size

Composition of surveyed households

30% of households with pregnant or lactating women

27% of households with at least one person with a disability or chronic illness

Health

- As reported by UNHCR in the population data and key demographical indicators (31 Dec 2018)
 In Bangladesh the Upazila Nirbahi Officer often abbreviated UNO, is the chief executive of an Upazila (sub-district) and a mid-level officer of the Bangladesh Civil Service (Administration Cadra)
- 3. As reported by Bangladesh Bureau of Statistics in -"District Statistics 2011 Cox's Bazar". See link: http://www.bbs.gov.bd/site/page/2888a55d-d686-4736-bad0-54b70462afda/-

12% of households with children under 5 reported the presence of at least one child under 5 ill with diarrhoea in the two weeks prior to data collection

37% of households reported facing challenges in accessing medical clinics

% of households reporting facing challenges in accessing medical clinics, by challenges⁴

Services are too far	29%	
Services are too expensive	18%	
Services are overcrowded	11%	
Required treatment unavailable	6%	

22% of households reported the presence of individuals with an illness serious enough to require medical treatment in the 30 days prior to data collection

Of individuals reported to have had an illness serious enough to require medical treatment in the 30 days prior to data collection, **95%** individuals sought treatment for the illness⁵

Of individuals who sought treatment, % accessing different treatment sources⁶

71% of households did not seek health services from facilities built in response to the Rohingya influx in 2017

Of 71% households not using facilities built for Rohingya influx, % reporting reasons for non-use⁷

Prefer the services that already exist	42%
Don't know about these services	36%
Services are too far	33%
Services are not available to host community	27%

Education

% of individuals, by highest grade achieved

% of individuals aged 12-24 reported to have completed primary school (graduated from grade 5)

% of individuals aged 18-24 reported to have completed secondary school (graduated from grade 12)

% of children and youth reported to be attending formal education during the 2018 academic year⁸

% of children and youth reported to be attending nonformal education during the 2018 academic year⁹

% of households reporting barriers accessing primary and secondary education for boys and girls¹⁰

- 4. Four most common challenges accessing medical clinics are shown, and respondents could select more than one option.
- 5. Sample size male (n=133) and female (n=171)
- 6. Three most common treatment sources are shown.
- 7. Respondents could select more than one option.
- 8. Formal education includes government-run schools, Aliah madrassahs (madrassahs teaching government-certified curriculum), and private schools.
- Nonformal education includes NGO schools, madrassahs other than Aliah madrassahs (and hence not government certified), and vocational training courses.
- 10. This question was only asked if respondent household contained boys/girls of primary (5-11) and secondary (12-17) school age.

% of households reporting barriers accessing primary and secondary education for boys and girls, by barrier¹¹

	Primary		Secondary	
	Boys	Girls	Boys	Girls
Facilities are too far	11%	14%	9%	9%
Safety concerns at or on the way to facilities	6%	9%	6%	2%
Services are too expensive	1%	4%	4%	8%

4% of households reported receiving awareness training on child rights in the 6 months prior to data collection

4% of households reported receiving awareness training on importance of education in the 6 months prior to data collection

24% of households with children aged 5-11 reported receiving aid distribution from formal schools in the 6 months prior to data collection

22% of households with children aged 12-17 reported receiving aid distribution from formal schools in the 6 months prior to data collection

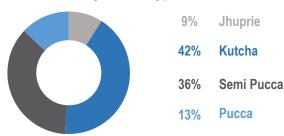

% of households reporting receiving aid distributions from formal schools in the 6 months prior to data collection, by type of distribution received¹²

Aid	Aged 5-11	Aged 12-17
Health and Hygiene/WASH kit	2%	2%
Winterization kit	0%	0%
School supply	23%	19%

Shelter & Non-Food Items

% of households by shelter type¹³

% of households reporting use of different fuels as their primary fuel for cooking¹⁴

Firewood	82%
LPG/gas cylinder	18%
Biogas	0%

75% of households reported being connected to the electricity grid

Of households that reported being connected to the grid, % that reported average electricity availability per day in the 30 days prior to data collection¹⁵

More than 6 hours	83%	
Less than 6 hours	17%	

6% of households reported receiving training on how to protect their shelter from strong wind/cyclone.

5% of households reported receiving training on how to protect their shelter from flood

% of households reporting the NFIs most urgently needed for their shelter¹⁶

Cooking stove	62%	
Solar lamp	51%	
Kitchen set	47%	
Blanket	41%	
Other	16%	

- 11. Three most common education barriers are shown, and respondents could select more than one option. Sample size aged 5-11 boys (n=104) and girls (n=195) and aged 12-17 boys (n=99) and girls (n=96)
- Respondents could select more than one option. The option of food was not included in the types of aid. Sample size for household with children aged 5-11 (n=27) and children aged 12-17 (n=45)
- 13. In Bangladesh, housing is classified into four categories according to structure type and the materials used:
 - 1) Jhuprie (temporary): are shacks made from branches, bags, tarpaulin, jute, etc.
 - Kutcha (temporary): made of mud, bamboo, wood and corrugated iron sheets (CIS) as roofs.
 - Semi-pucca (semi-permanent): where walls are made partially of bricks, floors are made from cement, and roofs from corrugated iron sheets.
 - 4) Pucca (permanent): with walls of bricks and roofs of concrete.
- 14. Three most common primary fuels for cooking are shown.
- 15. This question was only asked to the 75% of respondents who reported their households were connected to the grid.
- 16. Five most common items are shown, and respondents could select up to three options. "Other" option included home repair material, television, refrigerator, water tank etc.

21% of households reported having a solar light

Security of tenure

% of households reporting ownership of their plot of land and/ or house

Yes, I own the land	93%
No, I do not own the land	5%
Land is co-owned	2%

Of households who reported ownership of their plot of land or house, **79%** reported holding the deed to it

% of households who reported renting or being hosted on their plot of land or house¹⁷

Renting	2%	
Hosted	3%	

WASH

Water

% of households with access to improved drinking water sources

Primary drinking water sources	
✓ Improved water sources	100%
Piped water tap/ tapstand into settlement site	8%
Tubewells/borehole/handpump	91%
Protected dug well	1%
★ Unimproved water sources	0%
Surface water (river, dam, lake, pond, stream, canal)	0%

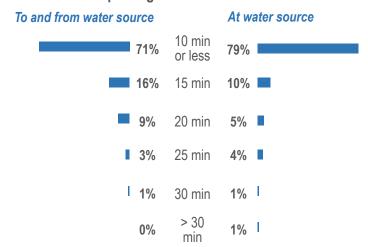

Of households reporting access to an improved drinking water source, % that reported different levels of reliability on availability of water¹⁸

Always/year-round	84%	
Intermittently (predictable)	11%	
Intermittently (unpredictable)	5%	I .

78% of households reported having enough water for drinking, cooking, washing and bathing

% of households by time required to travel in both directions and queuing at the water source

37% of households reported having problems collecting water

% of households reporting problems collecting water, by problem¹⁹

O	Water source is too far	15%
2	Water tastes bad	12%
3	Path to water source is too steep	11%

12% of households reported treating water before drinking

% of households reporting use of different water treatment practices $^{\! 20}$

Cloth filters	7%
Household filters	5%
Boiling	0%

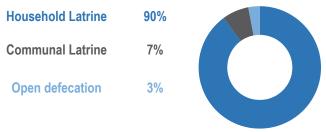

- 17. This guestion was asked to households that reported not owning land.
- 18. This question was asked only to the 100% respondents who reported improved sources of water as their primary water source.
- 19. Three most common problems of collecting water are shown, and respondents could select more than one option.
- Three most common water treatment methods are shown, and respondent could select more than one option.

Sanitation

% of households by reported usual defecation location

33% of households reported facing problems accessing latrines

% of households reporting problems accessing latrines, by problem²¹

1	Latrine is not safe	14%
2	Too many people using latrine	11%
3	Latrine is not private (i.e. people can see inside)	11%

Environmental sanitation

% of households reporting visible presence of solid waste, stagnant water or human faeces within 30 metres of their shelter during the 30 days prior to data collection²²

Trash/ solid waste	31%	
Stagnant water	16%	
Human faeces	16%	

🦫 Hygiene

66% respondents were able to name at least 3 of the 5 critical times for handwashing

% of households where respondent named different handwashing times²³

Critical times	
Before eating	94%
After defecation	93%
Before cooking	63%
After cleaning a child's bottom	18%
Before feeding children	14%

30% of households reported women facing problems with accessing menstrual hygiene materials²⁴

% of households reporting problems accessing menstrual hygiene material, by problem^{23,24}

Too expensive	21%	
Other needs are prioritized	15%	
Preferred types not available	5%	
Not enough available in market	4%	

Food Security and Livelihood

% of households reporting primary food source

Market	94%	
Own production	5%	
Other	1%	

% of households falling into different food consumption groups based on household Food Consumption Score²⁵

Acceptable	62%
Borderline	31%
Poor	7%

- 21. Three most common problems accessing latrine are shown, and respondents could select more than one option.
- 22. Respondents were asked about solid waste, stagnant water and human faeces in three separate questions.
- 23. Respondents could select more than one option.
- 24. Questions on menstrual hygiene management were only asked to female respondents, by
- 25. The frequency weighted diet diversity score or "Food Consumption Score" is a score calculated using the frequency of consumption of 9 different food groups consumed by a household/individual during the 7 days before data collection. Based on the score they receive, households are categorised into food consumption groups indicating different levels of dietary diversity. Bangladesh-specific thresholds were used to make these calculations. See link: https://www.wfp.org/content/coping-strategies-index-field-methodsmanual-2nd-edition

Average household Coping Strategy Index (CSI) score was 8 (out of a possible 56)²⁶

% of household reporting use of different consumption based coping strategy²⁷

Rely on less preferred and less expensive food	73%
Borrow food, or rely on help from a friend or relative	43%
Limit portion size at mealtimes	26%
Reduce number of meals eaten in a day	17%
Restrict consumption by adults in order for small children to eat	14%

% of households reporting three main sources of income sustaining their household in the 30 days prior to data collection²⁸

Skilled wage labour	48%
Small business	30%
Agricultural production and sales	16%
Agricultural/fishing casual labour	15%
Remittances from abroad	11%

% of households reporting changes in their economic status in the 12 months prior to data collection

2%			
7%			
4%			
2%			
	2%	2%	2%

% of households reporting changes in cost of living in the 12 months prior to data collection

Significantly increased	25%
Somewhat increased	54%
Not changed	17%
Somewhat decreased	3%
Significantly decreased	1%

.

Nutrition

% of households where women of reproductive age were reported to have awareness of different sources of support for infant and young child feeding²⁹

Doctors	64%
Midwife/nurse	25%
Older relatives	21%

Protection

25% of females aged 20-25 years were reported to have married before age 18³⁰

% of households reporting the presence of community based protection mechanisms³¹

O	None	
2	Health	19%
3	Education	13%

87% of households reported feeling secure in their current location.

Perceived attitudes and experiences regarding Rohingya refugees

% of households reporting different levels of interaction with Rohingya refugees

Never	51%	
Everyday	22%	
Once a week	16%	
Once a month	11%	

- 26. This assessment used the "reduced" CSI (rCSI), which measures coping behaviours in the 7 days prior to the data collection in response to inadequate food or insufficient money to buy food.
- 27. Respondents where asked on each coping strategy and how many day in the past 7 days did they use this strategy.
- 28. Five most common main sources of income are shown, and respondents could select up to three options.
- 29. This question was asked to female respondents, by female enumerators. Respondents could select more than one option. The results are generalisable to 95% confidence level and 10% margin of error.
- 30.This question was only asked for women/men between the age of 20-25, who reported to be married. Sample size male (n=26) and female (n=78)
- 31. Three most common responses are shown, and respondents could select more than one option. Question was framed as follows: "Are you aware of any groups or committees of community members in your location that are working on any of the following issues?"

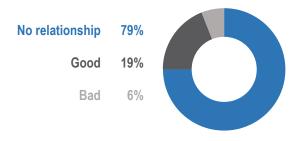

Of households who reported different levels of interaction with Rohingya refugees in the 30 days prior to data collection, % reporting different types of interaction³²

Male respondents

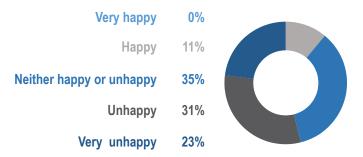

Female respondents

% of households reporting types of relationships with Rohingya refugees

% of households reporting attitudes towards the presence of Rohingya refugees in their communities

Of 54% households who reported being unhappy or very unhappy with the presence of Rohingya refugees in their communities, % who gave different reasons³³

0	Competition for services and utilities	73%
2	Competition for resources	66%
3	Threat of crime	65%

Three most common interactions are shown, and respondents could select more than one option.

Child Protection

15% of households reported the presence of at-risk children³⁴

Children involved in child labour	8%	
Children at risk of early marriage ³⁵	5%	
Separated children ³⁶	1%	1
Unaccompanied children ³⁶	0%	

% of households reporting the presence of safety risks to boys and girls in their communities³⁷

Risk for boys		Risk for girls				
	33%	Child labour	0	Chlid marriage	48%	
Å	30%	Do not know	2	Risk of sexual abuse/violence	39%	
П	22%	Risk of recruitment by armed groups	3	Risk of kidnapping	33%	"

34% of households reported the presence of children exhibiting at least one behaviour relating to symptoms of distress in the 30 days prior to data collection³⁸

% of households who report the presence of children exhibiting behaviours that relate to symptoms of distress in the 30 days prior to data collection, by type of behaviour³⁹

1 Headaches		16%
2	Stomach aches	11%
3	Change of appetite	10%

- 34. Households were deemed to contain at-risk children if they reported the presence of at least one child that was separated, unaccompanied, at risk of early marriage, or involved in child labour.
- 35. For children at risk of early marriage, respondents were asked if there was anybody in the household under the age of 18 who was married or about to get married.
- 36. For separated and unaccompanied children, respondents were asked if any new members under the age of 18 had joined the household in the past 6 months (excluding births and marriages), and if so what their relationship to the head of household was. If children were related to the head of the household, they were categorised as separated; if not, they were categorised as unaccompanied.
- Three most common safety risk for boys and girls are shown, and respondents could select more than one option.
- 38. Respondents could select more than one option.
- 39. Three most common syptoms of distress are shown. There were 14 other options including "none". 66% reported none. Question was framed as follows: "Within the past 30 days, have any children in this householdexperienced any of the following signs of distress?"; options were read out to respondents; respondents could select more than one option.

^{33.} Respondents could select more than one option.

Gender-Based Violence

% of women with final say on specified household decisions⁴⁰

Who has a final say on whether or not you should work to earn money?

Husband/partner	37%	
Respondent and husband/partner jointly	30%	
Decision not made/not applicable	18%	
Respondent	12%	
Respondent and someone else jointly	2%	I
Someone else	1%	L

Who has the final say on whether or not to use a method to avoid having children?

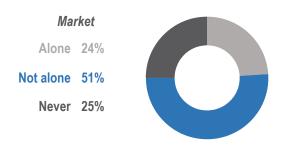

Respondent and husband/partner jointly	44%
Husband/partner	30%
Decision not made/not applicable	16%
Respondent	10%
Respondent and someone else jointly	0%
Someone else	0%

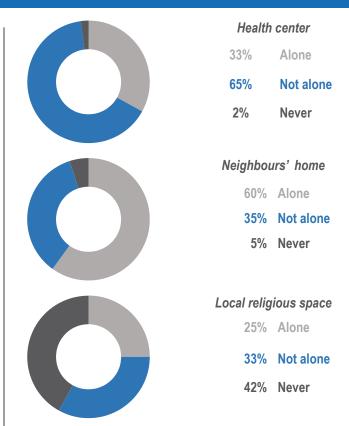

% of women that reported controlling the money needed to buy specified items⁴⁰

Items	Yes	No	Dont buy
Vegetables or fruits	42%	42%	16%
Clothes for yourself	36%	55%	9%
Any kind of medicine for yourself	33%	50%	17%
Toiletries for yourself	34%	50%	16%

Freedom of movement for women⁴⁰

% of women who reported they are allowed to move to specified places

% of men with specified attitude on gender roles in family life⁴¹

	Agree	Disagree	Depends
The important decisions in the family should be made only by the men of the family.	57%	39%	4%
If the wife is working outside the home, then the husband should help her with household chores.	72%	22%	6%
A married woman should be allowed to work outside the home if she wants.	14%	73%	13%
The wife has a right to express her opinion even when she disagrees with what her husband is saying.	10%	67%	23%
A wife should tolerate being beaten by her husband in order to keep the family together.	35%	54%	11%
It is better to send a son to school than it is to send a daughter.	6%	90%	4%
Women should have a say in important decisions in the community.	40%	47%	13%

^{40.} These questions were only asked to female respondents, by female enumerators. Respondents were asked for consent prior to discussing these topics. The results are generalisable to 95% confidence level and 10% margin of error.

^{41.} These questions were only asked to male respondents, by male enumerators. Respondents were asked for consent prior to discussing these topics. The results are generalisable to 95% confidence level and 10% margin of error.

Communication with Communities

Early warning mechanism for cyclones

78% of households reported receiving early warning messages prior to the arrival of Cyclone Mora in May 2017

77% of households reported mosque loudspeaker as the most preferred way of receiving early warning sign in future

% of households reporting access to different means of communication/information sources in the 30 days prior to data collection⁴²

Face to face conversation 85%

Mobile phone call 44%

Loudspeaker/megaphone 42%

annoucement

% of households reporting most preferred ways of providing feedback about services in their area⁴³

Speak face to face with community leader

At a community meeting

Speak face to face with service
provider

% of households reporting different information needs44

How to get more money/financial support	33%
How to get healthcare/medical attention	26%
How to get water	22%
How to get cooking fuel/firewood	19%
How to find work	17%

^{44.} Five most common different information needs are shown, and respondents could select more than one option.

^{42.} Three most common main ways of accessing information are shown, and respondents could select more than one option. Question was framed as follows: "In the last 30 days, what were the main ways you got information about what is happening here?"

^{43.} Three most common preferred ways of providing feedback about services are shown, and respondents could select more than one option.
