## Introduction

Since the conflict between Nigerian security forces and armed opposition groups (AOGs) escalated in 2013, more than two million individuals have been displaced.[1] Most were displaced within Borno State, particularly to urban centres in accessible Local Government Areas (LGAs).[2] The humanitarian response is challenged by information gaps including, but not limited to, a lack of clarity on the security environment in inaccessible areas outside of urban centres, clarity on the availablitiy of services and persons' access to services and the varying vulnerabilites of beneficiaries. This settlement profiling assessment, conducted by REACH and facilitated by the United Nations Office for the Coordination of Humanitarian Affairs (UNOCHA) in accessible LGA towns in Borno State, aims to support multi-sectoral coordination and response at the LGA level through information management. This factsheet presents evidence-based data on household (HH) needs and access to basic services in the surveyed towns, through results from a quantitative multi-sectoral survey and comprehensive infrastructure mapping. The HH level data sheds light on specific needs and vulnerabilities, and is complemented by secondary data on displacement patterns. For the infrastructure mapping, data collection teams identified and recorded the GPS locations and main characteristics of water access points, latrine blocks, schools, marketplaces, and health facilities. HH survey data was collected between 25 June and 6 August 2018, while infrastructure mapping data was collected between 1 and 3 October 2018. 144 HH surveys were conducted in accessible areas of Bama LGA with a confidence level of 95% and a margin of error of 10%.

Population

NUMBER OF INTERNALLY DISPLACED PERSONS (IDPs):   49,139[3]

Displacement

Arrivals vs. departures in Bama town in 2018:
18,881 IDPs arrived in Bama town from 3 January to 26 June 2018, while 397 departed from the location.[3] This is a notable decrease as compared to the departures documented in the last quarter of the previous monitoring period.

Of the 102 IDP HHs assessed, 33% reported that either a lack of means, a lack of shelter, or a lack of education services was their top push factor to leave their current location. The top 3 reported pull factors in choosing a future location were: access to security (67%), access to food (67%), and reunification with family (67%).[4]

[1] More detailed refugee and IDP figures for Nigeria can be found at the UNHCR Data Portal: https://data2.unhcr.org/en/situations/nigeriasituation
[2] Local Goverment Areas constitute the 2nd administrative level in Nigeria. As of April 2018, only urban centres were accessible in most LGAs, and two LGAs remained inaccessible (OCHA, April 2018).
[3] IOM Displacement Tracking Matrix (DTM, April 2018), Round XXIII dataset of baseline assessment.
[4] This question refers to a subset of the population surveyed. Results should be considered indicative only.

Access to Services

ACCESS TO WASH SERVICES

3% of HHs reported not having enough water to meet their basic needs in the 30 days prior to data collection.

Top 3 reported sources of water used by HHs for their daily use:[5]

Water source type	Water source	Percentage
Improved water source	Borehole / tubewell	96%
	Handpump	89%
	Public tap	58%

13% of HHs reported that they needed more than 30 minutes (including traveling and queueing) to collect water for their daily needs.

Most commonly reported issue, if any, when collecting water:

No problem

6% of HHs reported that their main source of drinking water was of average or bad quality. The most commonly reported reason for average or bad quality water: **Water tastes bad**.

% of HHs reporting the frequency with which they treat their main source of HH water:

Yes, always	56%
Yes, sometimes	3%
No, water is clean	25%
No, treatment not available	4%
Other / No response / Don't know	12%

Most commonly reported water treatment method: N/A

37% of HHs reported not having soap in their current location.

% of HHs reporting access to latrine:

99% Yes, access to latrine
0% No, open defecation in the bush
1% No, open defecation in designated area
0% No response/Don't know

Main type of latrine accessed by HH in LGA:
Traditional latrine (pit)

Most commonly reported garbage disposal practice in community:

Disposed anywhere, buried

[5] Respondents could choose several answers

ACCESS TO SHELTER AND NON-FOOD ITEMS (NFIS)

Top 3 reported shelter types for HHs in the given area:

Emergency shelter given by aid agency	57%
Masonry building (blocks/bricks)	41%
Traditional house (adobe/ mudbrick)	2%

HHs reporting the most common shelter occupancy arrangement:

Hosted by community members

% of HHs reporting damage to shelter, by severity of damage:

1% Completely destroyed
85% Partially damaged
14% Little to no damage
Most commonly reported cause of damage to shelter in area:

Bullet holes / conflict

Least owned basic NFI kit items, by % of HHs reporting having them:

|	
School textbooks	0%
Sanitary pads / Aquatabs	1%
School bags / School notebooks	1%

ACCESS TO HEALTH SERVICES

35% of HHs reported that at least one member was ill in the 15 days prior to data collection.

Most commonly reported illness by HH:[6]

Fever

% of HHs reporting distance to closest health facility:

60% Less than 2 km
34% Within 2-5 km
4% More than 5 km
2% No response/Don't know

26% of HHs reported that one female member had given birth in the year prior to data collection.

Most commonly reported location for women to give birth:

At NGO health facility

Most commonly reported person attending to birth:

Skilled birth attendant

ACCESS TO FOOD & AGRICULTURE

Top 3 reported means of accessing food items:[6]

|	
Food assistance from humanitatian organisations	90%
Purchased in local markets	34%
Own agriculture / cultivation	3%

41% of HHs reported that they did not have physical access to a marketplace in the two weeks prior to data collection.

Most commonly reported barrier to accessing enough food:

Food is not being distributed

31% of HHs reported needing to access land to grow crops or graze livestock in the 3 months prior to data collection.

% of HHs who were able to access land:

97% Yes, access to amount of land needed
0% Yes, but did not access amount needed
3% No, not able to access any land

Most commonly reported barrier to accessing land in area:

Insecurity / not safe to farm

Top 3 reported livelihoods-based coping strategies used in the 30 days prior to data collection:[6]

Purchase food on credit	65%
Borrow money	27%
Spend savings	23%

ACCESS TO LIVELIHOODS & RECOVERY

Top 3 reported sources of income for HHs in the 30 days prior to data collection:[6]

Small business	61%
Agriculture	30%
Trade	20%

Most commonly reported way of accessing physical cash in area:

Cash in hand

ACCESS TO EDUCATION SERVICES

66% of HHs had at least one child who was not attending any formal or informal school, at the time of data collection.

56% of HHs had at least one child that had never attended formal school, at the time of data collection.

[6] Respondents could choose several answers

% of HHs reporting presence of a child-friendly space (CFS) in the area:

1% No CFS in area
98% NGO-run CFS
0% Park
1% Nursery
0% No response/Don't know

Most common reported barrier to accessing education, if any:

No barrier

ACCESS TO SAFETY AND SECURITY

39% of HHs reported experiencing a security incident in the three months prior to data collection.

Most commonly reported type of security incident:

Armed attacks

73% of HHs reported experiencing movement restrictions in the area in the two months prior to data collection.

Most commonly reported type of movement restriction:

Military-set curfew

ACCOUNTABILITY TO AFFECTED POPULATIONS (AAP)

% of HHs who received assistance in the past three months:

67%	Yes
33%	No
0%	No response / Don't know

% of HHs who reported that the assistance received was appropriate to their needs:[7]

| 76% |
| 24% |
| 0% |

% of HHs who reported that they were treated with respect by aid workers:[7]

N/A	Yes
N/A	No
N/A	No response / Don't know

% of HHs who reported that they were asked for feedback on the aid delivered:[7]

| 50% |
| 49% |
| 1% |

**Most common reported type of humanitarian assistance received:**

Food assistance
