CONTEXT AND METHODOLOGY

The Government of Kenya has committed itself to end drought emergencies in Kenya by the year 2022. This is clearly spelt out in the Second Medium Term Plan (MTP 2013-2017) for the Kenya Vision 2030¹. However, as the drought continues to prolong, it has become increasingly important to fill information gaps in a systematic and comprehensive manner to inform a more effective humanitarian response and planning for immediate life-saving activities and contingency planning for sustainable solutions.

Samburu County is one of the 47 County governments in Kenya. It has three sub-counties (Samburu East, Samburu North and Samburu West) and is located in the arid and semi-arid lands (ASALs) of Kenya. The primary economic activity is nomadic pastoralism with parts of Samburu practicing agro-pastoralism.

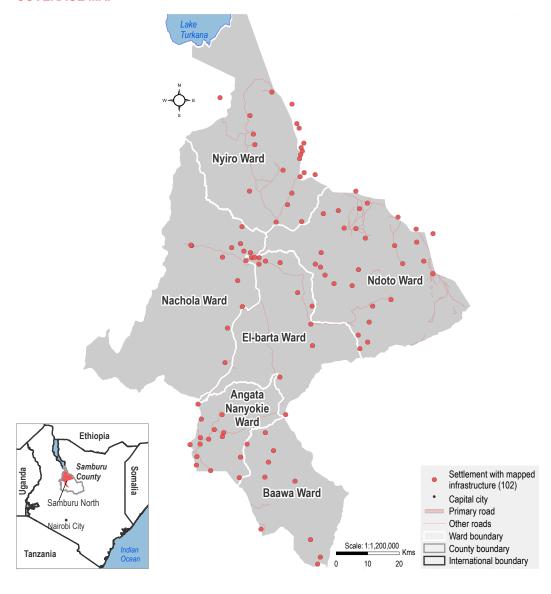

The severe lack of rain across Samburu County since August 2018 has led to a steep decline in access to water², alarming rates of food insecurity and heavy strain on livelihoods³. According to the National Drought Management Authority (NDMA), Samburu County is one of the most affected counties by drought in Kenya. Existing information on locations and conditions of key primary infrastructure and service delivery in the County for humanitarian planning and intervention is however sparse.

REACH conducted a detailed and up-to-date County-level infrastructure mapping to feed into the Samburu County's Disaster Risk Management and contingency plans. This information will also enable the County government to better analyse and plan a coordinated humanitarian response to address the needs and barriers to assessing services.

With support from County government departments of Samburu, ACTED and local communities, the first round of data collection took place from 27 November to 21 December 2019 which was followed by another round of data collection that took place from 22 July to 2 August 2020. A total of 549 infrastructures in 102 settlements were mapped out in Samburu North Sub County: 159 education facilities, 30 health and nutrition facilities, 11 markets, 293 water points, 4 main bridges, 11 administrative offices, and 41 financial institutions.

The mapping was done using the Open Data Kit (ODK) tool through smart phones by recording the location and condition of the infrastructure. For all infrastructure targeted, enumerators completed the questionnaire about the physical state of facilities as well as the services offered by each facility. In addition to this, key informants (KIs) at education, health and water sources facilities provided primary data on service provision.

COVERAGE MAP

³ Prevalence of negative coping mechanisms such as missing meals and eating seeds, and rising caseloads of malnutrition. Information obtained during ACTED needs assessment on 15th -24th May 2019 in Samburu County. In terms of poor terms of trade, poor body conditions of livestock, dormant farms and lack of labor opportunities. Information obtained during ACTED needs assessment on 15th -24th May 2019 in Samburu County.

¹ Kenya vision 2030

²Twenty one per cent (21%) of the population in Samburu North, 25% in Samburu East and 46% in Samburu West have access to water. Information obtained from a KI on 22 May 2019.

* HEALTH AND NUTRITION

Health facilities in Samburu North Sub County:

Туре	Functioning	Not functioning	# of health facilities
Hospitals	1		1
Health centres	7		7
Dispensaries	21	1	22
Total	29	1	30

80% of the health facilities are run by the Government of Kenya (GoK) while 20% are faith based health facilities.

100% of the functioning heath facilities were reportedly offering outpatient services while none of the health facilities was reportedly offering family planning, psychiatric and laboratory services at the time of data collection.

Top five reported services offered at the health facilities:4

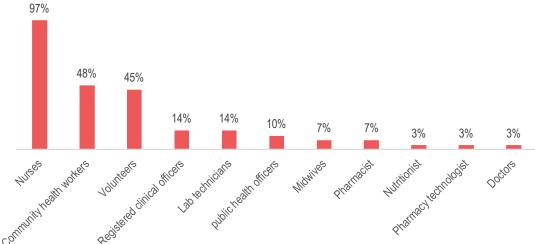

Outpatient	100%
Maternal	86%
Vaccination	86%
Nutrition	83%
Pharmacy	83%

Top five reported nutrition services offered at health facilities that offered nutrition services at the time of data collection:

the thine of data concentration i	
Outpatient Therapeutic Care (OTP)	100%
Targeted Supplementary Feeding Programme (TSFP)	79%
Infant and young Child feeding (IYCF)	38%
Micronutrient supplementation	17%
Blanket Supplementary Feeding Programme (BSFP)	13%

The top reported vaccinations offered by the health facilities that offered vaccination services at the time of data collection were Oral Polio Vaccine (OPV), measles, Diphtheria Tetanus and Pertussis (DPT), tetanus and Bacillus Calmette Guerin (BCG) vaccine.

Types of health workers reported, by % of health facilities:⁴

97% of health facilities were reported by KIs as having at least one nurse while 3% of the health facilities were reported as having at least one doctor at the time of data collection.

38% of the health facilities were reportedly damaged at the time of data collection. Seventy-three per cent (73%) of them were reportedly damaged because they were too old while another 36% were damaged by wind.

73% of health facilities had a source of water supply at the time of data collection.

Most commonly reported sources of water at the health facilities:4

Rain water harvesting	41%
Borehole	41%
Тар	27%
River/lake	27%

87% of health facilities reportedly had a source of lighting at the time of data collection.

Most commonly reported sources of electricity/power at the health facilities:4

⁴Key informants could choose two answers

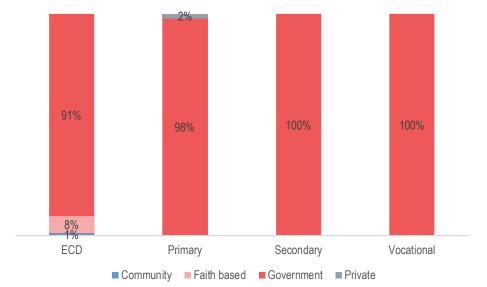

Education facilities in Samburu North Sub County:

Туре	Functioning	Not functioning	# of education facilities
Early Childhood Development (ECD) centres	75	15	90
Primary school	51	2	53
Secondary school	14	1	15
Vocational training		1	1
Total	140	19	159

REACH initiative was able to get information about the number of students and teachers in 73% of the schools from KIs. The student-teacher ratio⁵ in ECD centres was 64:1, 36:1 in primary schools and 20:1 in secondary schools. Most of the schools were reportedly run by the GoK, 8% of the ECD centres are faith based institutions while 2% of the primary schools are private schools.

Proportion of schools by reported management and education level:

28% of schools reportedly had a feeding programme at the time of data collection.

Proportion of schools per education level that had a feeding programme at the time of data collection:

47% of schools had a source of water supply at the time of data collection.

Most commonly reported sources of water at the schools:4

Rain water harvesting	60%
Тар	35%
Borehole	19%

43% of schools had a source of lighting at the time of data collection.

Most commonly reported sources of electricity/power at the schools:4

Solar		91%
Kenya power		12%
Generator	1	1%

66% of schools had functional latrines at the time of data collection. KIs from 71% of these schools reported that these latrines were segregated by gender.

55% of the schools that were functional were reportedly damaged at the time of data collection. Seventy-six per cent (76%) of them were still being used while 16% were not being used because they required repair and 7% were totally destroyed.

Most commonly reported causes of damage to the schools that were damaged:4

Lack of renovation	67%
Wind	39%
Vandalism	27%

⁵The recommended student-teacher ration in Kenva is 40:1

WATER SANITATION AND HYGIENE (WASH)

Type of water sources	Functioning	Not functioning	# of water sources
Borehole	28	32	60
Dam/water pan	33	12	45
Protected well with pump	9	9	18
Protected well without pump	55	1	56
Rock catchment	5	2	7
Tank	24	24	48
Tap stand	3		3
Unprotected well	35	10	45
Water kiosk	7	4	11
Total	199	94	293

49% of the boreholes that were not functioning at the time of data collection were incomplete, 25% had a broken generator and 15% had broken taps.

47% of the tanks that were not functional had a broken tap while 16% had a broken generator.

80% of the boreholes reportedly had a storage tank at the time of data collection.

67% of the water facilities were reportedly having clean drinking water at the time of data collection.

Proportion of water sources where water reportedly has to be paid for:4

Water kiosk	86%
Protected well without pump	56%
Protected well with pump	33%
Borehole	32%
Unprotected well	17%
Tank	13%

The average price of a 20 liter jerrican of water reportedly was 10 Kenya shillings at the time of data collection.

There reportedly is a total of 4 main bridges that are constructed using steel and concrete.

Type of markets	Functioning	Not functioning	# of mar- kets
Livestock market		1	1
Main market	10		10
Total	10	1	11

The livestock market and 80% of the main markets are reportedly managed by the community while the other 20% are reportedly managed by the government. There were reportedly different kinds of food that are available in these main markets including cereals, cooking fats, rice, milk, sugar and vegetables among others.

Type of financial institution	Functioning	Not functioning	# of financial institutions
Mobile money agent	32	1	33
Banking agency	4	1	5
Savings And Credit Cooperative (SACCO)	3		3
	39	2	41

Most of the financial institutions (33/41) were mobile money agents at the time of data collection.

ADMINISTRATION

Type of administration office	Functioning	Not functioning	# of administra- tive offices
Chiefs office	6		6
County office	2		2
Office of the president	1		1
Police post	2		2
Total	11		11
